

NeedHub

SUMMARY

A platform where users can instantly request help and have their request automatically routed to nearby or qualified people who can assist.

PROBLEM STATEMENT

Today people need help with hundreds of small tasks: - Need a website designed - Need someone to move furniture - Need tutoring - Need a dog walker - Need a plumber - Need local recommendations - Need startup advice

Current solutions are fragmented: - Reddit is unstructured - Facebook Groups are noisy - Fiverr is service-focused - Upwork is project-focused - WhatsApp Groups are closed communities

There is no simple place to post a need and instantly reach people capable of helping.

SUCCESS METRICS

User Metrics: - Daily Active Users - Requests Posted Per Day - Average Response Time - Successful Matches - Repeat Users

Business Metrics: - Cost Per Acquisition - Monthly Active Helpers - Monthly Active Requesters - Completed Requests - Premium Conversion

USER TYPES

Every account is a User.

No separate buyer/seller roles.

Users can: - Ask for help - Offer help - Do both simultaneously

USER PROFILE

Basic Information: - Name - Profile Picture - Email - Phone - Location - Verification Status

Skills examples: - Website Design - Marketing - Tutoring - Moving Help - Plumbing - Fitness - Photography

Users can select multiple skills.

CORE FEATURES

1. Create Request User submits: - Title - Description - Category - Location - Photos (optional) - Urgency

Example: Need help building a small business website. Location: Remote Category: Website Design Urgency: This week

2. AI Categorization System automatically identifies: - Category - Location relevance - Required skills

Example: Website Design → UI/UX → Frontend Development → WordPress

3. Smart Feed Routing Requests are routed to users based on: - Skills - Location - Activity - Past successful help

Example: Need help moving couch Shown to: - Nearby users - Moving service providers - Users who previously helped

4. Interested Button Users can: - Interested - Can Help - Skip No public comments. Only interested users are revealed.

5. Private Chat Requester sees: - Profile - Distance - Rating - Verification Can initiate chat. Supports: - Text - Images - File Sharing - Location Sharing

6. Completion Flow After work is done: Requester marks: - Completed - Not Completed Both users rate each other.

7. Reputation System Users earn: - Help Score - Reliability Score - Response Rate No followers. No likes. No influencers. Trust comes from completed requests.

FEED LOGIC

Feed = Dynamic

Priority: 1. Nearby requests 2. Skill-matched requests 3. High urgency requests 4. Recently posted requests

No social feed. Only opportunities to help.

FUTURE ROADMAP

V2: - Payments - Escrow - Background Checks - Scheduling

V3: - AI Matchmaking - AI Request Summaries - AI Recommended Helpers

V4: - Local Services Marketplace - Business Accounts - API Integrations - Enterprise Requests

POSITIONING

"Post what you need. Instantly reach people who can help."

Not a social network. Not a freelancer marketplace. Not a community forum.

A need-routing platform.
